PERSONAL SECURITY / SAMPLE REPORT

Account safety plan

Someone reviews six account-security habits and is unsure about recovery settings.

EDITION 2026.10 FIXED EXAMPLE NO LIVE ASSESSMENT

04
ACTION ITEMS

RESULT SUMMARY

Your account safety plan

Start with the first item and work through the rest at your own pace.

THE FICTIONAL INPUT

Do your important accounts each have a different password?	No
Have you enabled a passkey or multi-factor authentication?	No
Are your recovery email and phone details current?	Not sure
Have you reviewed signed-in devices and connected apps?	Yes
Are your devices and browsers receiving updates?	Yes
Do you have a recent backup you can restore?	No

Your action plan

Full findings and next steps are on page 02.

01 Use a different password for every important account

02 Add another sign-in factor

03 Check your recovery options

04 Check that your backup can be restored

This example is an action list, not a security score or a safety verdict. Read the scope and limits with the findings.

Your next steps, explained.

01

Use a different password for every important account

You identified this as a gap in your current setup.

YOUR NEXT STEP

Start with your primary email, then banking and accounts that can reset other accounts. A password manager can help.

02

Add another sign-in factor

You identified this as a gap in your current setup.

YOUR NEXT STEP

Enable a passkey or multi-factor authentication through each provider's official settings. Never share sign-in codes.

03

Check your recovery options

You are unsure about this setting. Check it in your account or device settings.

YOUR NEXT STEP

Use the official security settings to confirm recovery details. Keep recovery codes somewhere private and separate from the device.

04

Check that your backup can be restored

You identified this as a gap in your current setup.

YOUR NEXT STEP

Keep a separate backup of important files and test restoring a small file. A synced folder alone may also sync deletions.

SCOPE & LIMITS

This plan uses your answers only. It does not access accounts, inspect devices, search breach records or establish that an account is secure.

Fixed fictional example. No check was run on your information.
